PREFACE

Civilian Defense is one of ten parts of a series of selected and annotated bibliographies to be known collectively as "Bibliographies of a World at War." The aim is to provide a guide to current materials published since April 1941, relating to national defense and the war effort. It is planned to issue the various parts noted below as separates and later bound as a unit. Supplements will appear at certain regular intervals.

- I. Political Developments and the War
- II. Agriculture in a War Economy
- III. Natural Resources and Raw Materials
- IV. Industry in Wartime
- V. Labor in Wartime
- VI. Economics of War
- VII. Civilian Defense
- VIII. Social and Cultural Problems in Wartime
- IX. Conduct of the War
- X. Postwar Planning and Reconstruction

BIBLIOGRAPHICAL NOTE

c.1

This annotated and selected list of references is intended to serve as a guide to recent pamphlets, books, and articles on civilian defense. As part of the series of "Bibliographies of a World at War", it is supplemented by other sections in the series--particularly the section entitled "Social and Cultural Problems in Wartime." Topics that closely bear on civilian defense, or that might be considered as part of civilian defense, but are treated under "Social and Cultural Problems in Wartime", are: civil liberties; communal feeding in Britain, consumer protection, housing, morale, public health, and the family in the war.

The present bibliography is drawn largely from material published between April 1941 and March 1942 inclusive. For publications before April 1941 no large annotated and selected bibliography is now available, although several small selections (items 5, 8, 9) have been published. A selected but un-annotated bibliography for material published since the beginning of the war was put out in June 1941 by the Division of Bibliography of the Library of Congress (item 6).

There is only one bibliography of civilian defense that is unselective and not limited in scope to a special phase, the Bibliography of Air Raid Precautions and Civilian Defense (item 2). Three volumes of this exhaustive bibliography have been published and six more are in preparation.

Current publications from Germany and occupied Europe have for the most part not arrived, or are arriving very late, so that few references to them are available in this or any other bibliography. Continental civilian defense publications of the pre-war period, however, are numerous and reflect a much greater concern for the subject than here or in Great Britain. Almost 400 books from 12 European countries are listed in Prentiss, Civil Air Defense (item 3). For European articles on civilian defense, published volumes of the W. P. A. Bibliography mentioned above (item 2) are the best source. For current articles on air raid precautions in Britain, the Journal of the Air Raid Protection Institute (item 10), and the Air Raid Defense League Bulletin (item 1) are available.

Guides to official publications in Great Britain and the United States are particularly useful, because many of the instructions for personal conduct, fire-fighting, and structural protection have been standardized and are repeated in all handbooks. A selected list of British official publications (item 4) is supplied by the British Library of Information in New York. There are several selected bibliographies of Office of Civilian Defense publications (items 5, 7, 9, 13, 14).
